Although currently this practice is not part of standard care, some argue that such an obligation may be established in the future. Little information is available, however, on the implications of this requirement, from the point of view of GSPs.** To explore the opinions of genetics professionals on this issue, we sent a self-administered questionnaire to 1,000 randomly selected U.S. and Canadian members of the American Society of Human Genetics. We received 252 completed questionnaires. The major categories of respondents were physician geneticist
- Introduction text: Advances in medical genetics are occurring at an exponential rate. As a result of progress in the Human Genome Project and in the elucidation of the genetic bases of cancer and common multifactorial diseases, the ability of genetics service providers (GSPs) to meet the population's needs for counseling and evaluation is becoming increasingly challenged. Added to the pressure on GSPs of serving clients for so many new indications is a growing awareness of another issue, the ethical and possibly legal obligation to recontact former patients when new developments occur. From an ethical standpoint, among the situations in which a moral obligation to recontact patients may be considered to apply are (1) those in which a diagnosis

In this manuscript, we present a non-rigid approach to jointly solve the tasks of 2D- 3D pose estimation and 2D image segmentation via shape learning of 3D embedded shapes for a general class of objects or deformations for which one may not be able to associate a skeleton model. We provide experimental results that highlight the algorithm's robustness to noise, clutter, occlusion, and shape recovery on several pose estimation and segmentation scenarios

Abstract
 Because global warming (GW) is caused primarily by human behavior, attempts to reduce GW will benefit from an understanding of the social psychology of GW-related behavior. The present investigation consisted of three studies aimed to provide a psychological understanding of people's perceptions of GW, predictors of GW-related behavioral intention, and reactions to Ecological Footprint Calculators (EFCs). Study 1 investigated GW perceptions among 112 college students. Results showed that participants continue to equate GW with general environmental problems, although participants were more likely to recognize the importance of driving less and recycling more in mitigating GW and less likely to implicate aerosol spray cans in GW than

Chapter 1

Vampire bat rabies causes significant impacts within its endemic range in Mexico. These impacts include livestock mortality, animal testing costs, post-exposure prophylaxis costs, and human mortality risk.(Anderson et al., 2012) Mitigation of the impacts can be achieved by vaccinating livestock and controlling vampire bat populations.(Borchering, Liu, Steinhaus, Gardner, & Kuang, 2012)
